Earth Observation and Geospatial Applications Lab

Center of Interdisciplinary Research and Innovation (CIRI-AUTH)

- The Aristotle University of Thessaloniki (www.auth.gr) is the largest public University in Greece established in 1925.
- The Earth Observation and Geospatial Applications Lab of AUTH (EO.Lab, <https://eolab.geo.auth.gr>) resides within the Department of Physical and Environmental Geography, School of Geology, Faculty of Sciences.
- The expertise of EO.Lab members spans across a variety of Earth Observation and Geospatial Information Science-Technology domains, including Remote Sensing, SAR Interferometry, Photogrammetry, Surveying and Geodesy, GNSS, LiDAR and Sonar.

Integration of the interdisciplinary CEO² (Center of Earth and Ocean Observation) team in CIRI

<https://kedek.auth.gr>

The main mission of **CIRI** is the promotion and development of interdisciplinarity in an open and collaborative environment of excellence, which utilizes the research infrastructures of AUTH at the local, national and European level, expands the University's synergy with society and contributes to the economic and social development of the country.

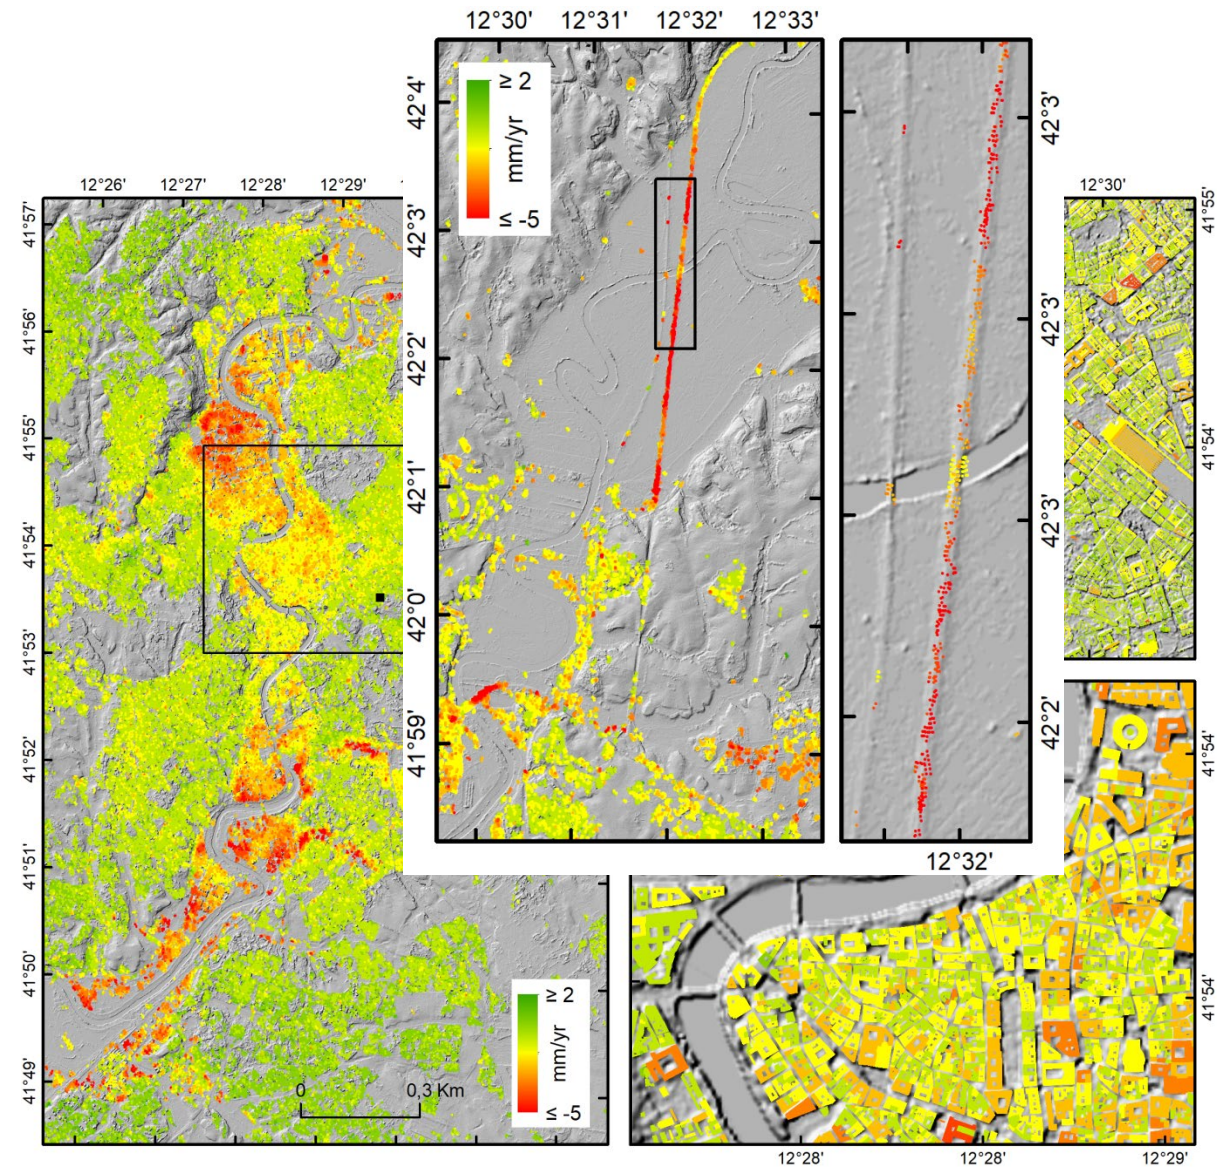

Persistent Scatterers Interferometry (PSI)

Exploit temporal and spatial characteristics of interferometric signatures from point targets remaining 'stable' over time

-  PS (Permanent Scatterers)
-  DS (Distributed Scatterers)
-  No Data

SNAPPING PSI Full: PSI measurements at full resolution on the GEP

The first service for generating ground motion time series at full resolution on the GEP has now been released! It will be open soon to the GEP community.

SURFACE MOTION MAPPING | SNAPPING SERVICE ON GEP

A multi-temporal interferometric service that produces measurements of surface displacements based on ESA SNAP and StaMPS software packages

SNAPPING IFG

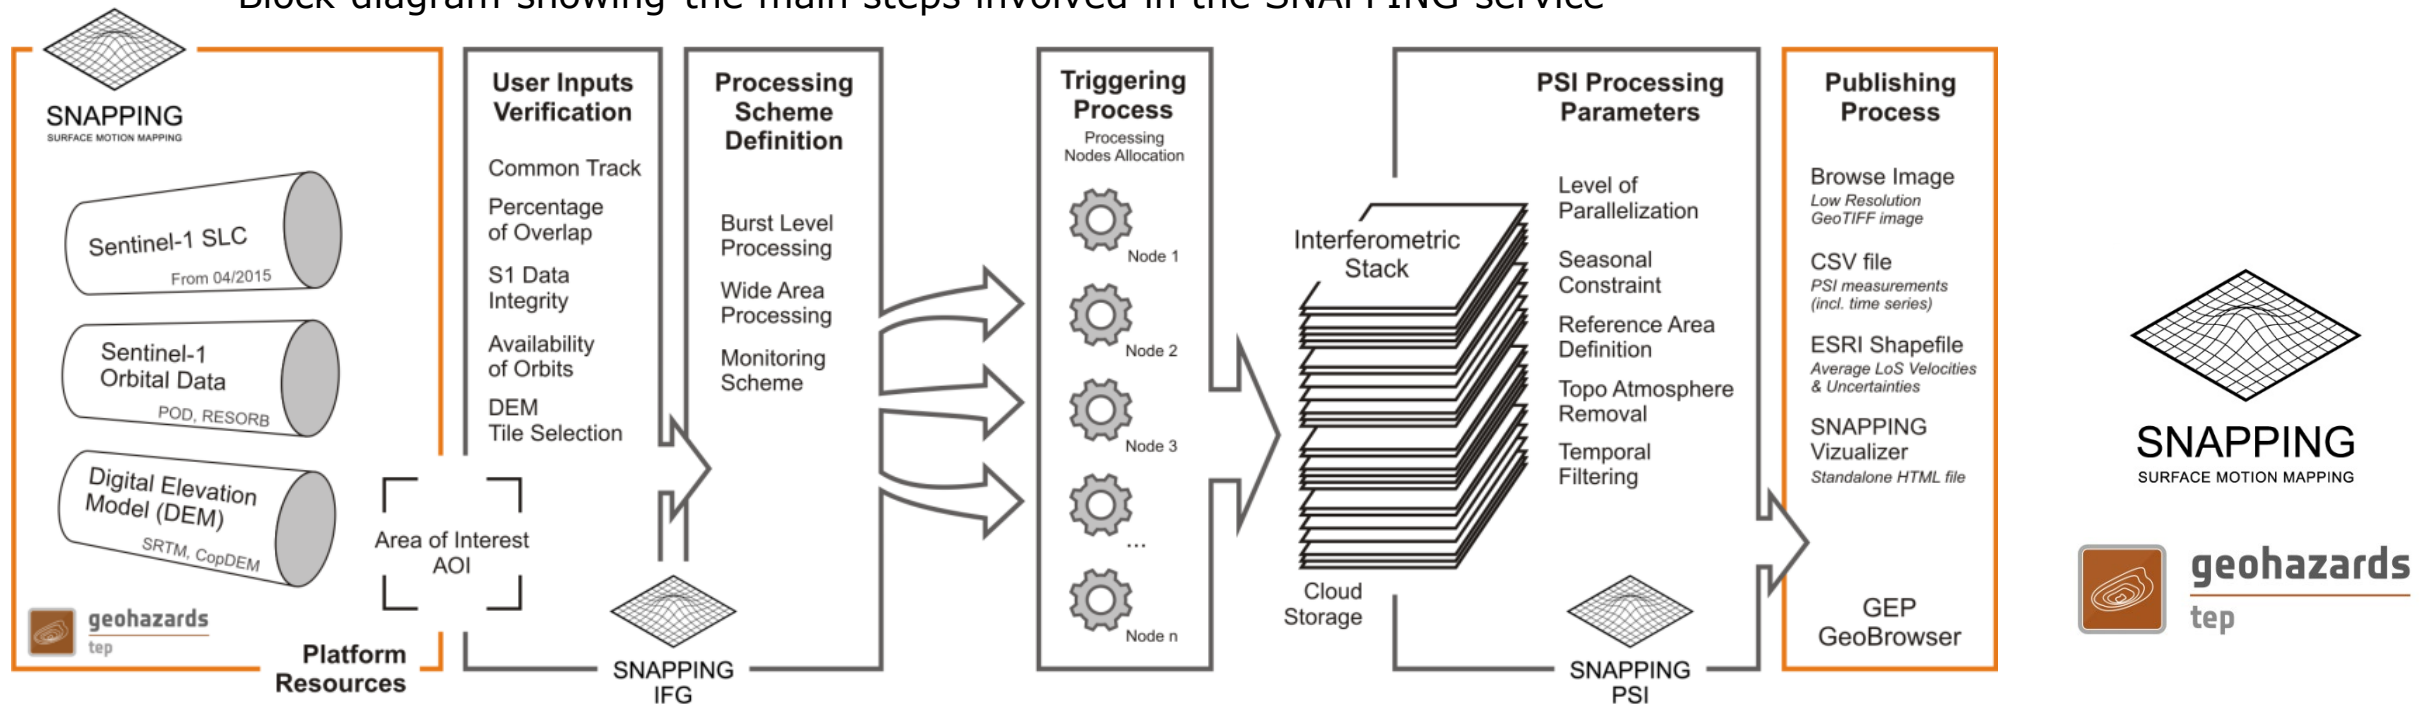

SNAPPING PSI

Two step process

The first consists in setting-up **SNAPPING IFG** processing pipeline to generate the interferogram stack

In the second step the interferogram stack is channeled to the **SNAPPING PSI** pipeline for time series analysis

Block diagram showing the main steps involved in the SNAPPING service

Family of SNAPPING Services

SNAPPING PSI Med

A service focusing on the delivery of PSI measurements at reduced spatial resolution (spatial averaging of point targets within a 100x100 meters radius to allow wide-area coverage in a relatively short time. The SNAPPING PSI Med service is proposed for inspection of areas of large extent to identify sites where more dedicated analysis is required.

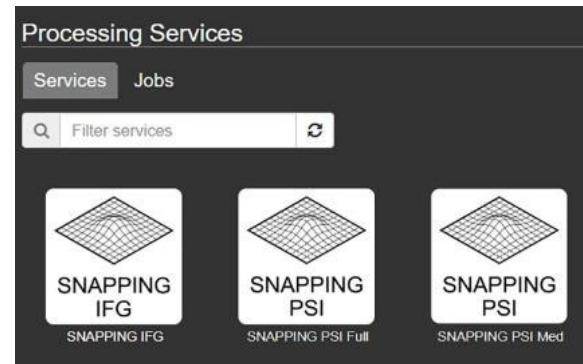

SNAPPING PSI Full

Full sensor resolution PSI service applicable for a detailed regional investigation of surface motion, as well as for building-level and infrastructure monitoring. Persistent Scatterers (PS) targets represent surface features stable over the observation period, mainly man-made objects and non-vegetated natural terrain.

SNAPPING PSI+ (PS/DS)

Tailored interferometric processing on both PS and Distributed Scatterers (DS), providing optimum measurement densities. DS are typically identified over homogeneous ground, non-cultivated lands and deserted areas.

SNAPPING | GEP Interface

User interfaces of SNAPPING IFG and PSI (Med and Full resolution) services on GEP, including default processing parameters.

The interfaces refer to version 2.0 of the services released in July 2022.

SNAPPING
SURFACE MOTION MAPPING

Sentinel-1 PSI average LoS displacement rates for the period 2015-2020 over Thessaloniki International Airport using the SNAPPING PSI (a) Med and (b) Full resolution services. The improved density of measurements using PSI Full service is shown.

SNAPPING PSI Full led to ~1500% increase of PSs (total of 16500 targets) compared to the corresponding PSI Med solution (1120 targets).

SNAPPING PSI Outputs

The SNAPPING measurements are provided as a text file in **Comma Separated Values (CSV) format** containing information about each point target.

Furthermore, PS displacement rates and corresponding uncertainties are provided in standard vector format (i.e. ESRI shapefiles).

File	Format	EPGS	Description
<Filename>.csv	Standard Comma-Separated Values file	4326 (WGS 1984)	Tabulated surface motion measurements with following attributes: ID, Latitude, Longitude, Vel, Vs, Coh, Height, Inc_Angle, YYYYMMDD (as YYYY: year; MM: month & DD: day).
<Filename>.txt	Standard text file that contains plain text	Not applicable	Processing metadata, including detailed information on the version of the service used, production date, EO sensor, start/end of the measurements, number of images etc.
<Filename>.shp	Standard ESRI vector file format to be accessed with proprietary (ESRI) or other open source software (e.g. QGIS)	4326 (WGS 1984)	Surface motion measurements as point vector data containing same attributes as CSV file (see above).
<Filename>.rgb.tif	Standard GeoTIFF file	4326 (WGS 1984)	Low resolution browse image.
<Filename>.legend.png	Standard Portable Network Graphics raster file	Not applicable	Colour scale (as raster image) corresponding to browse image file (i.e. Filename.rgb.tif).
<Filename>.html	Standard file in Hypertext Markup Language	Not applicable	Standalone visualization file showing surface motion point measurements (average motion rates in mm/yr) as overlaid on OpenStreetMap background.

SNAPPING Visualizer

A standalone HTML (off-line) visualization file is also provided to facilitate proper inspection of data by end-users without the need for ingestion into any geospatial database.

Processing Strategy for SNAPPING PSI Greece

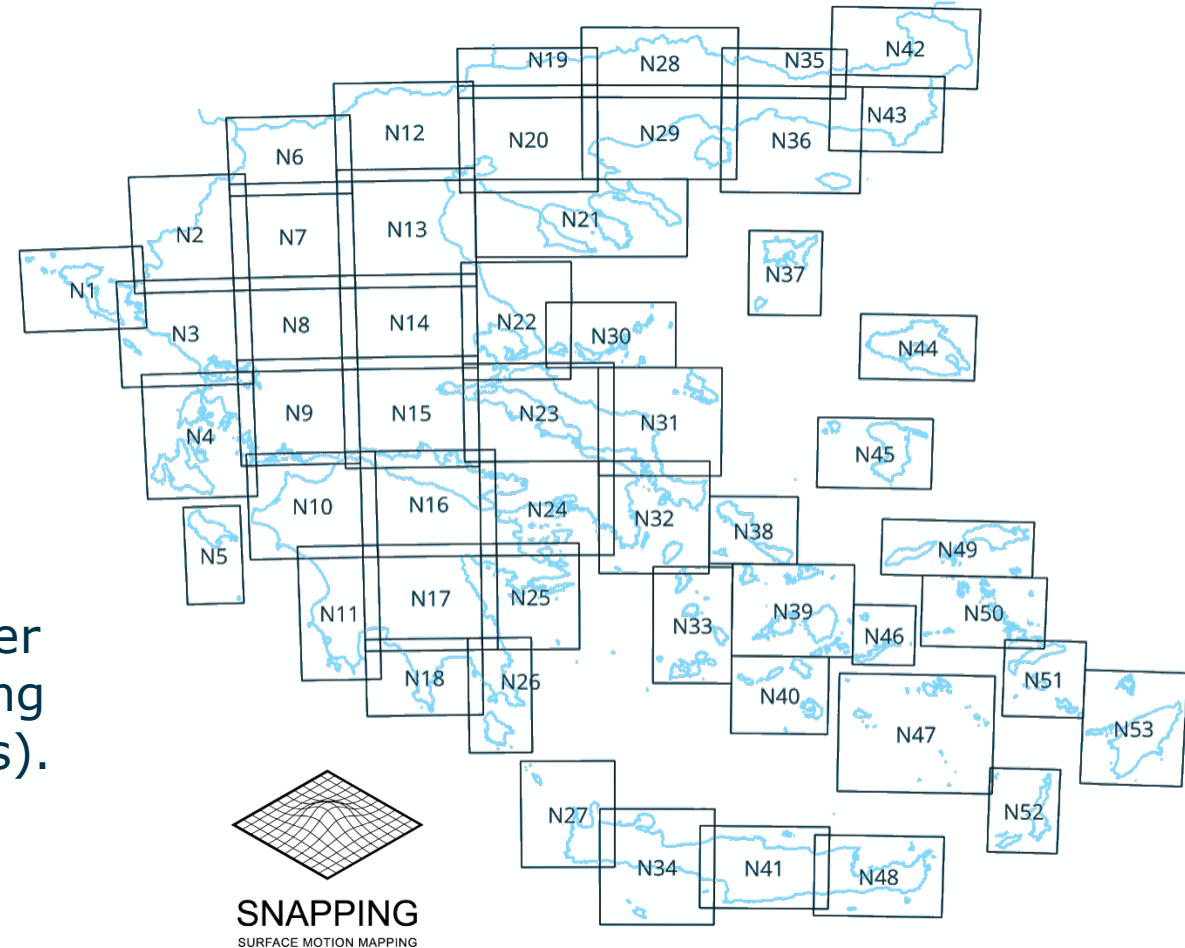

A dedicated processing scheme based on SNAPPING PSI Med was developed to ensure coverage of entire land surfaces (including isolated islands), while minimizing propagation of error sources.

The Greek territory (**~132k sq.km**) was thus splitted into **54 tiles** of approx. 90 x 90 km, having spatial overlap not lower than 10 km.

The totality of Copernicus Sentinel-1A archive over Greece in descending orbits was exploited covering the period from **04/2015** to **12/2021** (~7 years).

In practice, 174-198 observation dates per tile were processed.

Product Visualisation on GEP

Verification of SNAPPING PSI Measurements

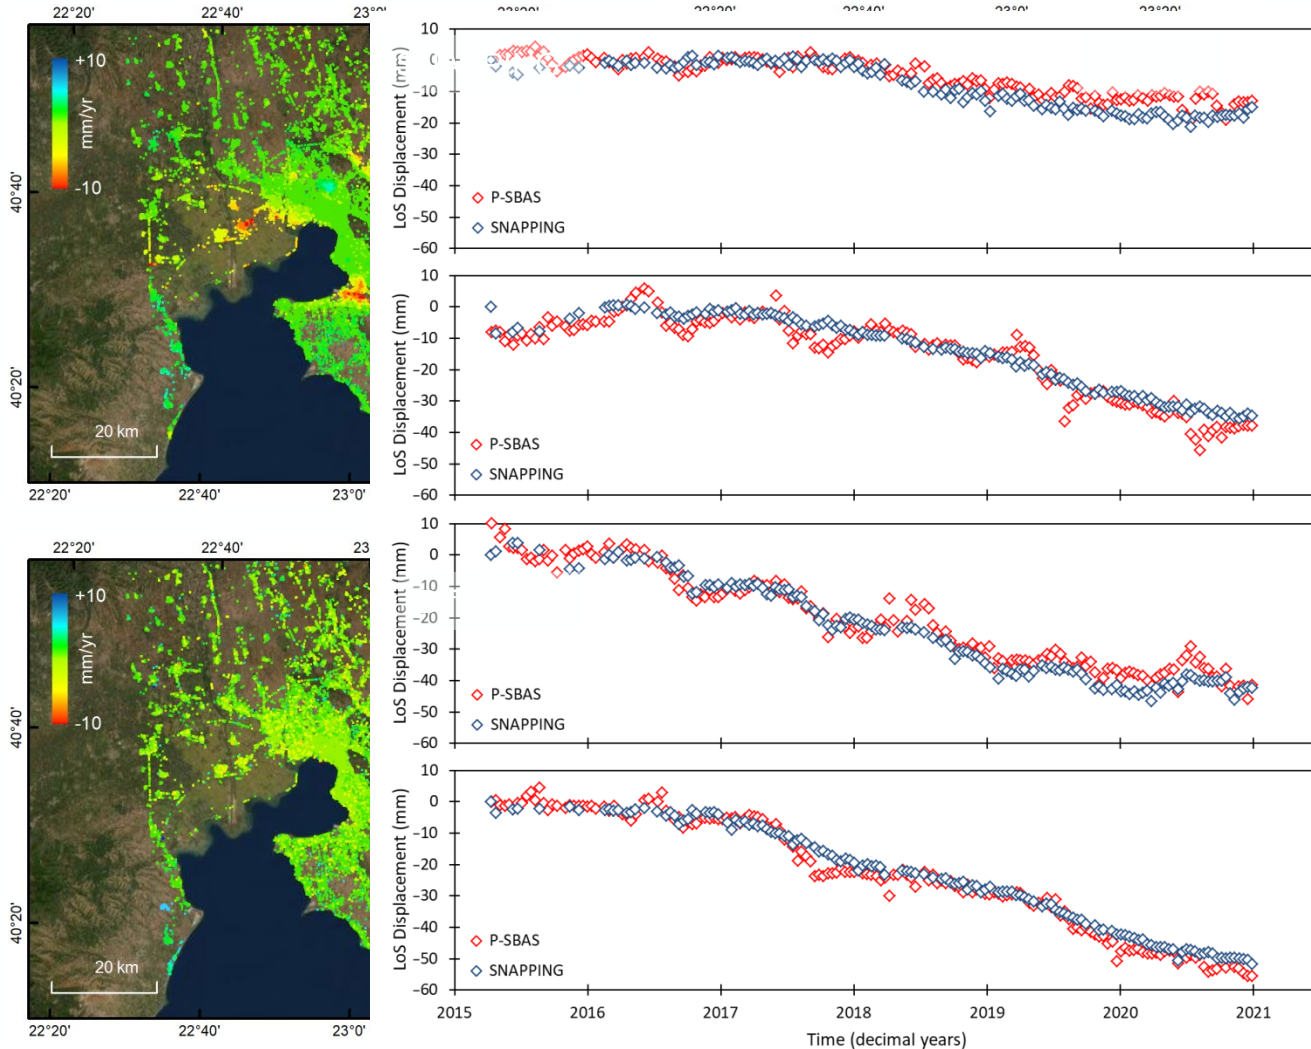

Sentinel-1 LoS displacement rates over **Cap-Haïtien (Haiti)** for the period 2017–2019 based on (a) **SNAPPING PSI Med** and (b) **P-SBAS** services. Differences between the solutions (SNAPPING minus P-SBAS) are spatially shown (c), and the dispersion of the calculated motion rates is also plotted.

Most differences are within the error estimates of the technique. Note that only neighboring points (100 m radius) between the independent solutions are shown.

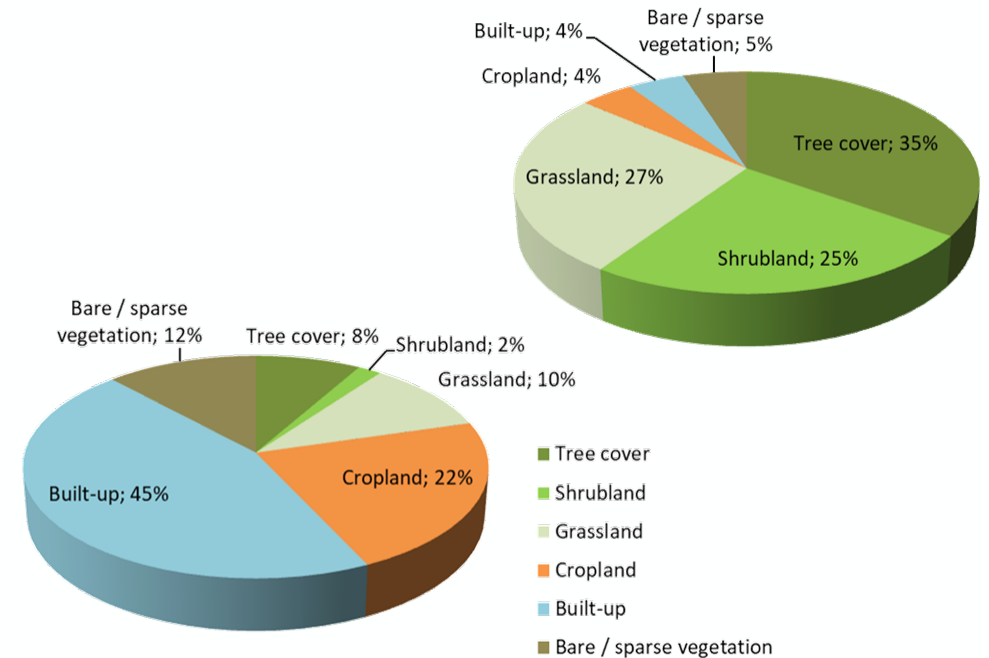

Contains modified Copernicus Sentinel-1 data (2017–2019), processed AUTH on GEP.

Verification of SNAPPING PSI Measurements

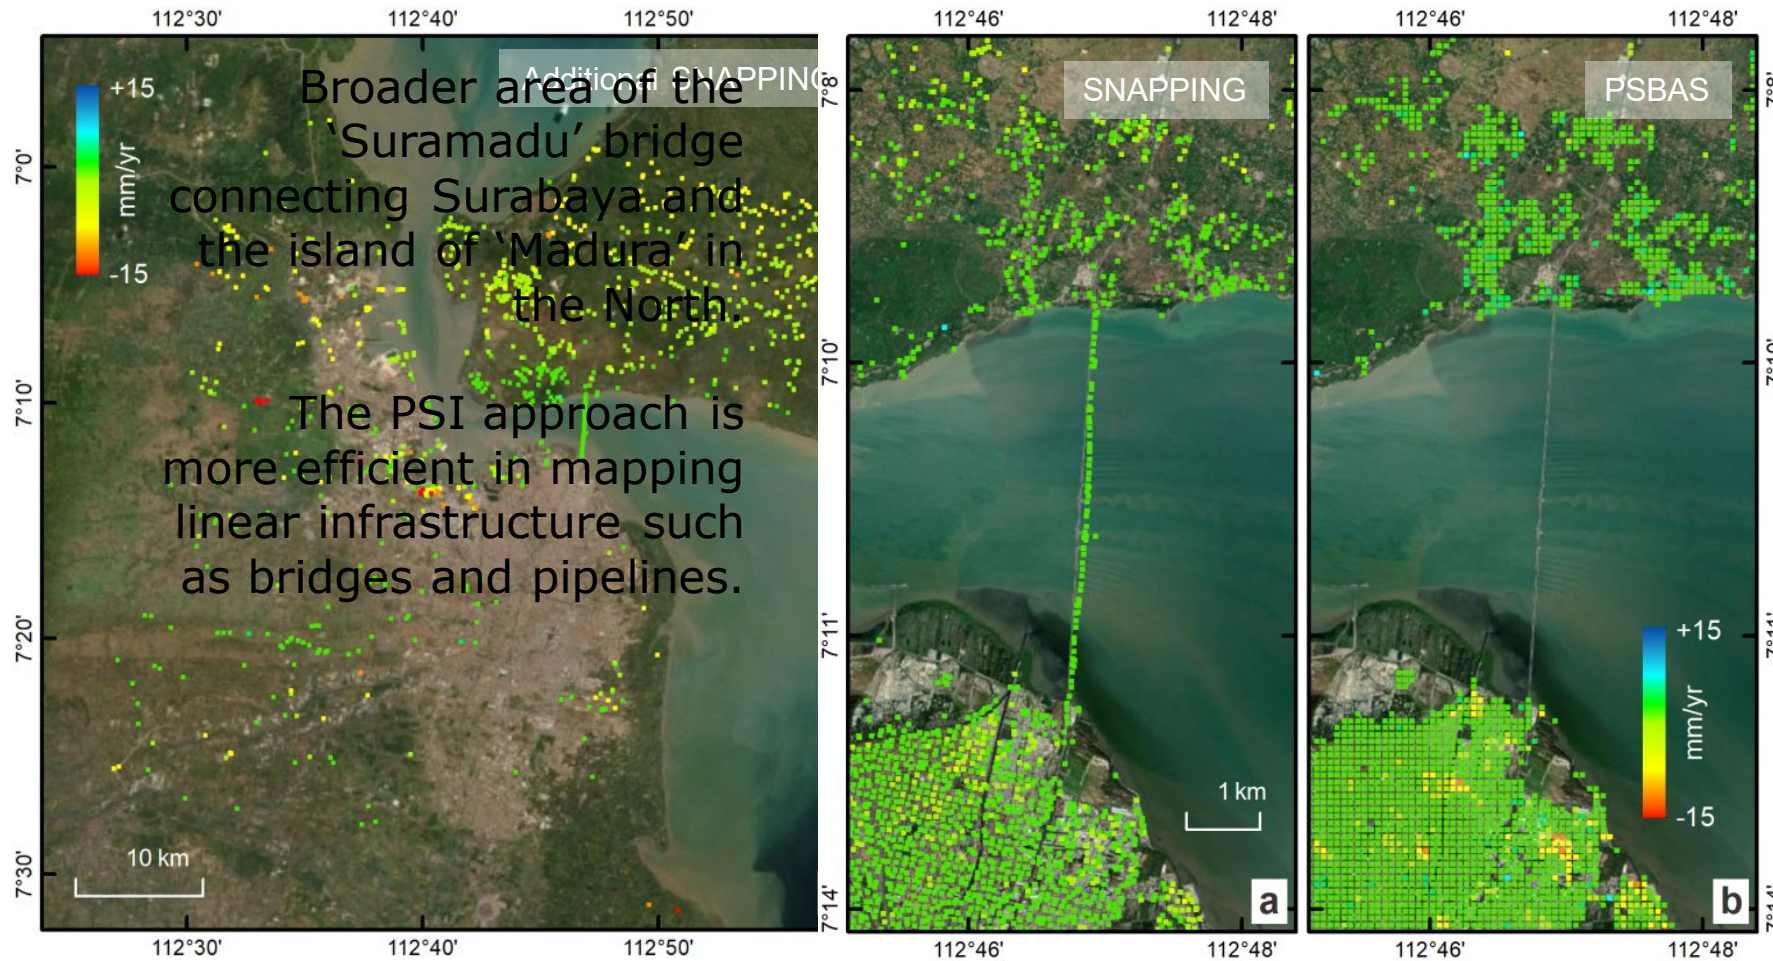

Sentinel-1 LoS displacement rates over the broader **Thessaloniki (Greece)** for the period 2015–2020 based on **SNAPPING** and **P-SBAS** services.

us Sentinel-1 data
h on GEP.

Verification of SNAPPING PSI Measurements

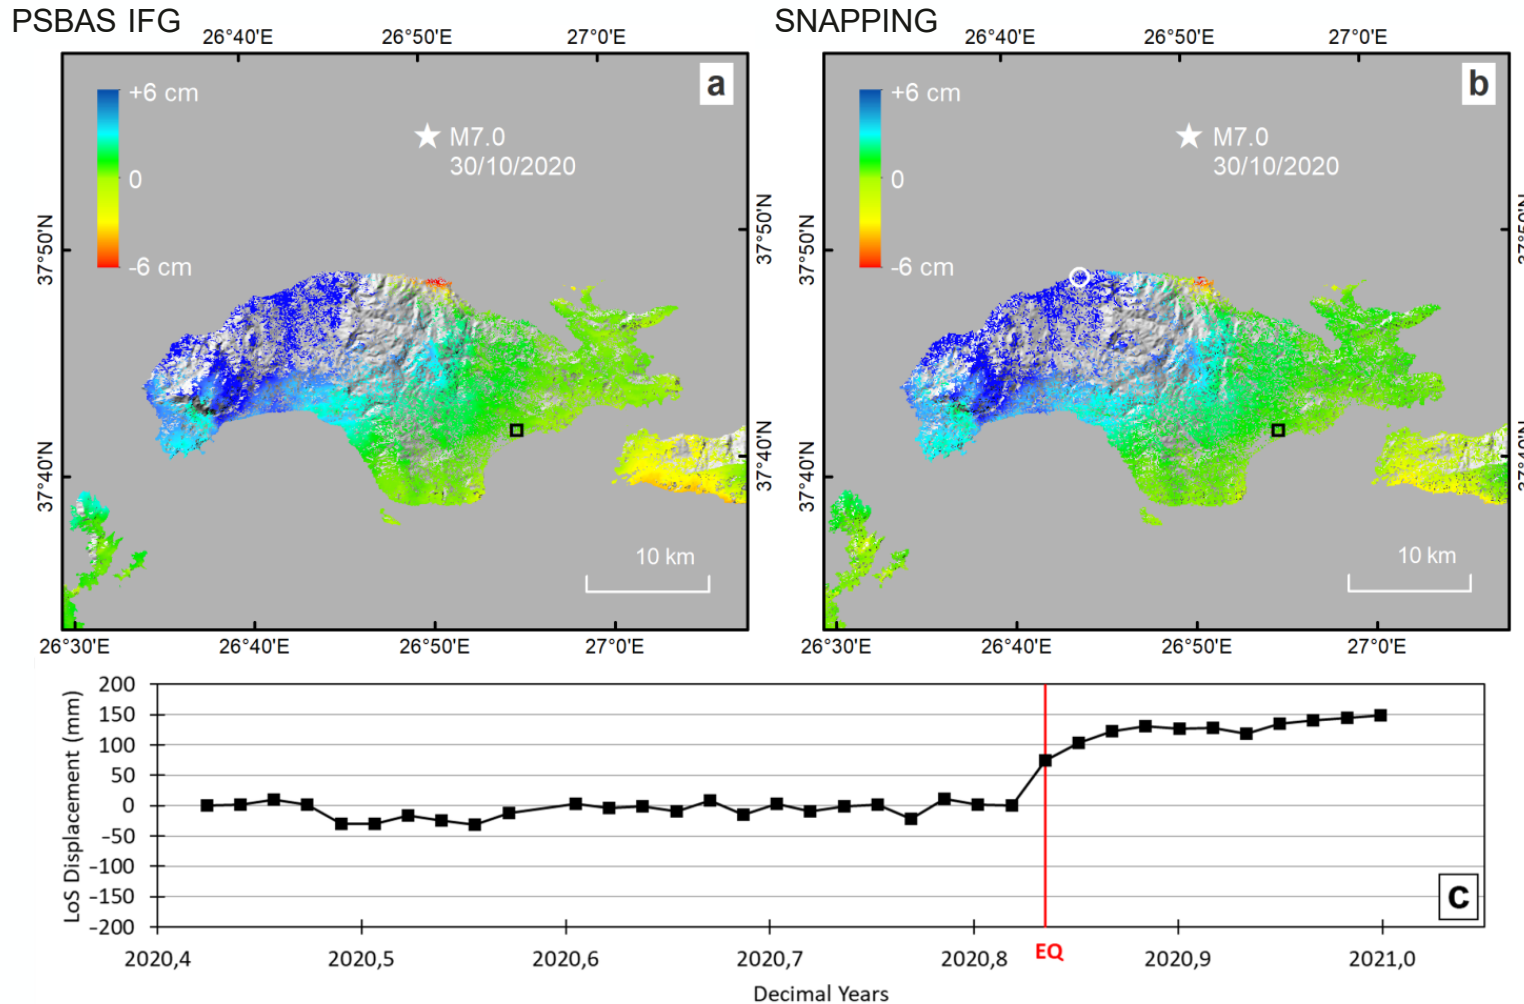

Sentinel-1 LoS displacement rates (2015–2020) by SNAPPING PSI Med and P-SBAS services over **Surabaya (Indonesia)**.

Please note that datasets do not share common references (see manuscript for details).

Contains modified Copernicus Sentinel-1 data (2015–2020), processed AUTH on GEP.

Verification | Moderate Co-seismic Motion

Co-seismic Sentinel-1 displacement field (24 October 2020–30 October 2020; ascending track 131) for the Samos M7.0 earthquake-based P-SBAS service (in IFG mode) at 100 m resolution (unwrapped and converted to LoS displacements) and corresponding displacements as extracted from SNAPPING PSI time series at medium resolution.

SNAPPING point measurements are averaged to 100 m grid for consistent representation among the techniques.

- Other roads and associated land
- Railways and associated land
- Port areas
- Airports

The processing performed under the SNAPPING InSAR GRreece activity was supported by the **ESA Network of Resources (NoR)** initiative.

NoR is a privileged channel providing science support for:

- Geohazards analysts (i.e., principal investigator, researcher, scientific engineer, PhD student, trainee) with EO data processing goals.
- Service providers or data providers, interested to connect their resources to be used via the Platform.
- Organizations interested in running user community trainings.

Thank you

Michael Foumelis
